Forecast for Saturday 10 Jun 2023

Weather: Early morning mist and low cloud, mainly in the east, will steadily clear through the morning, to leave most places fine with plenty of sunny spells. As the heat and humidity builds through the day, there is the risk of some heavy and thundery downpours to break out and slowly move northwards through the afternoon and evening. Showers will then clear northwards through the evening.

Chance of cloud-free hill tops above 600m: 60% at first, mainly in the east. Thereafter 100%, but occasionally dropping to 80% as cloud bases lower in any heavy showers or thunderstorms.

Low cloud and visibility: 400-500m bases possible at first, mainly in the east giving poor visibility in mist and hill fog. Thereafter, cloud free tops for much of the day, however the possibility of occasionally 600-800m bases in heavy showers or thunderstorms. Overall excellent visibilities, but dropping to low to moderate in showers.

Meteorologist's View

At first, winds will be strong and gusty over tops but these will ease through the day. With very high UV levels it is important to be prepared by wearing and taking plenty of high factor sun cream, a sunhat and sunglasses. With high temperature and increased humidity, plenty of water will be required as lengthy exposure to strong sunshine and high temperatures can cause exhaustion and dehydration. During the afternoon, heavy and thundery showers are likely to fall on hard, dry ground leading to the risk of slippery paths and surfaces as well as runoff.

Recent rainfall: measured at Neuadd: altitude 353m

Forecast for Sunday 11 Jun 2023

Weather: Early morning mist and low cloud possible in the far west, otherwise a fine start with plenty of sunshine before heavy and thundery showers break out through the afternoon. Another hot and humid day.

Maximum wind: Light and variable winds for much of the day, no more than 5-10mph.

Chance of cloud-free hill tops above 600m: 60% at first, mainly in the west then 100%, but 80% in showers.

Low cloud and visibility: 600m bases possible at first in the west with poor visibilities in any low cloud. Otherwise mostly cloud free tops, but potentially falling to 600-800m bases in showers.

Temperature: **Valleys:** Plus 13 Celsius, becoming plus 24 Celsius.
At 600m: Plus 12 Celsius, becoming Plus 18 Celsius
Freezing level: Well above summits.
